USING THE FUEL ECONOMY GUIDE

The U.S. Environmental Protection Agency (EPA) and U.S. Department of Energy (DOE) produce the *Fuel Economy Guide* to help car buyers choose the most fuel-efficient vehicle that meets their needs. The Guide is published in print and on the Web at

www.fueleconomy.gov. For additional print copies, please call DOE's Clean Cities Technical Response Service at 1-800-254-6735 or mail your request to: NREL - Fuel Economy Guide, 1617 Cole Boulevard, Golden, CO 80401.

Fuel Economy Estimates

Most vehicles in this Guide (other than plug-in hybrids) have three fuel economy estimates:

- A "city" estimate that represents urban driving, in which a vehicle is started in the morning (after being parked all night) and driven in stop-and-go traffic
- A "highway" estimate that represents a mixture of rural and interstate highway driving in a warmed-up vehicle, typical of longer trips in free-flowing traffic
- A "combined" estimate that represents a combination of city driving (55%) and highway driving (45%)

Estimates for all vehicles are based on laboratory testing under standardized conditions to allow for fair comparisons.

Flexible-fuel vehicles (FFVs), which can use gasoline and E85, have estimates for both fuels. Plug-in hybrid electric vehicles (PHEVs) have estimates for gasoline-only and electric-only operation and are discussed in more detail on page 27. For answers to frequently asked questions about fuel economy estimates, visit www.fueleconomy.gov.

Annual Fuel Cost Estimates

This Guide provides annual fuel cost estimates for each vehicle. The estimates are based on the assumptions that you travel 15,000 miles per year (55% under city driving conditions and 45% under highway conditions) and that fuel costs \$3.75/gallon for regular unleaded gasoline and \$4.02/gallon for premium. Cost-per-gallon assumptions for vehicles that use other fuel types are discussed at the beginning of those vehicle sections. The fuel costs were determined in advance to allow time for printing fuel economy labels and the Guide, and may not reflect current fuel prices.

Visit www.fueleconomy.gov to personalize fuel costs based on current fuel prices and your driving habits.

Your Fuel Economy Will Vary

Even though EPA recently improved its methods for estimating fuel economy, your vehicle's fuel economy will almost certainly vary from EPA's estimate. Fuel economy is not a fixed number; it varies significantly based on where you drive, how you drive, and other factors. Thus, it

Sample Fuel Economy Label

(Attached to New Vehicle Window)

Check the fuel economy label on the vehicle at the dealer showroom for its specific fuel economy (MPG) ratings. The ratings may vary slightly from the values in this guide because of engine and fuel system differences not listed here.

is impossible for one set of estimates to predict fuel economy precisely for all drivers in all environments. For example, the following factors can lower your vehicle's fuel economy:

- Aggressive driving (hard acceleration and braking)
- Excessive idling, accelerating, and braking in stop-and-go traffic
- Cold weather (engines are more efficient when warmed up)
- Driving with a heavy load or with the air conditioner running
- Improperly tuned engine or under-inflated tires
- Use of remote starters

In addition, small variations in vehicle manufacturing can cause fuel economy variations in the same make and model, and some vehicles don't attain maximum fuel economy until they are "broken in" (around 3,000–5,000 miles).

So, please remember that the EPA ratings are a useful tool for comparing vehicles when car buying, but they may not accurately predict the MPG *you* will get. This is also true for annual fuel cost estimates. For more information on fuel economy ratings and factors that affect fuel economy, visit www.fueleconomy.gov

UNDERSTANDING THE GUIDE LISTINGS

We hope you'll find the *Fuel Economy Guide* easy to use! Fuel economy and annual fuel cost data are organized by vehicle class (see page 2 for a list of classes). Within each class, vehicles are listed alphabetically by manufacturer and model.

Vehicle models with different features, such as engine size or transmission type, are listed as different vehicles—engine and transmission attributes are shown in the first column under the model name. Additional attributes needed to distinguish among vehicles (e.g., fuel type, suggested fuel grade) are listed in the "Notes" column. A legend for abbreviations is provided on page 5.

A "P" in the "Notes" column indicates that the manufacturer *recommends* that the vehicle be fueled with premium-grade gasoline, and a "PR" indicates that the manufacturer *requires* premium. The higher price of premium fuel is reflected in the annual fuel cost for these vehicles.

The most fuel-efficient vehicles in each class and alternative fuel vehicles are indicated with special markings (see

diagram below). Vehicles that can use more than one kind of fuel have an entry for each fuel type.

Interior passenger and cargo volumes are located in the index at the back of the Guide.

WHY SOME VEHICLES ARE NOT LISTED

Fuel economy regulations currently do not apply to

- Sport utility vehicles (SUVs) and passenger vans with a gross vehicle weight rating (GVWR) of more than 10,000 pounds—GVWR is the vehicle weight plus carrying capacity
- Other vehicles with a GVWR of 8,500 pounds or more or a curb weight over 6,000 pounds

Therefore, those vehicles are not tested, and fuel economy labels are not posted on their windows.

Also, for some vehicles, fuel economy information is not available in time to be printed in the Guide. However, you can find more up-to-date information at www.fueleconomy.gov.

Sample Vehicle Listing
(Not Actual Data)

Manufacturer Model Configuration (trans,eng size, cyl)	MPG		Annual Fuel Cost	Notes
	City/Hwy	Comb		
FORD				
Fiesta FWD				
AM-6, 1.6L, 4cyl	29/39	33	\$1,682	
M-5, 1.6L, 4cyl	29/38	33	\$1,682	
MINI				
Cooper S Coupe				
A-S6, 1.6L, 4cyl	26/34	29	\$2,044	P T
M-6, 1.6L, 4cyl	27/35	30	\$1,973	P T

	13/22	16	\$3,047	E85

Manufacturer

Model

The most fuel-efficient automatic and manual vehicles per class are listed in blue boldface type and marked with a blue pointer (▶).

EPA city & highway MPG estimates
EXAMPLE:
29 MPG city, 38 MPG highway

Transmission information: type (A=automatic, A-S=automatic transmission-select shift, AV=continuously variable transmission, M=manual, etc.) followed by number of gears or speeds

Alternative fuel vehicles are highlighted by a blue bar, and those that can use two kinds of fuel, such as flexible fuel vehicles, have an entry for each fuel type.

MPG

Annual Fuel Cost

Notes

EPA combined city/highway MPG estimate based on 55% city and 45% highway driving.

Additional information to help further identify the vehicle (e.g., engine and fuel system info) along with other useful information about taxes, required fuel grade, etc.
EXAMPLE: P=Premium Gasoline Recommended, T=Turbocharger

Vehicle Class

Estimated annual fuel cost, assuming 15,000 miles of travel a year (55% city and 45% highway) and an average fuel price

Flexible fuel vehicles (FFVs) can run on gasoline or E85 (a mixture of 85% ethanol & 15% gasoline).

Manufacturer Model Configuration (trans,eng size, cyl)

City/Hwy

Comb

Annual Fuel Cost

Notes

Engine size (in liters) followed by number of cylinders.
EXAMPLE: 2.0-liter, 4-cylinder engine

VEHICLE CLASSES USED IN THIS GUIDE

CARS		TRUCKS	
CLASS	Passenger and Cargo	CLASS	Gross Vehicle
	Volume (cu. ft.)		Weight Rating* (pounds)
TWO SEATERS		PICKUP TRUCKS	
SEDANS		Small	Under 6,000
Minicompact	Under 85	Standard	6,000 to 8,500
Subcompact	85 to 99	VANS	
Compact	100 to 109	Passenger	Under 10,000
Midsize	110 to 119	Cargo	Under 8,500
Large	120 or more	MINIVANS	Under 8,500
STATION WAGONS		SPORT UTILITY VEHICLES	Under 10,000
Small	Under 130	SPECIAL PURPOSE VEHICLES	Under 8,500
Midsize	130 to 159		
Large	160 or more		

*Gross vehicle weight rating = vehicle weight plus carrying capacity

TAX INCENTIVES AND DISINCENTIVES

Federal Tax Credits

You may be eligible for a federal income tax credit of up to \$7,500 if you purchase a qualifying electric or plug-in hybrid vehicle in 2011–2012.

Visit www.fueleconomy.gov for more information on qualifying models, credit amounts, and phase-out dates.

Gas Guzzler Tax

The Energy Tax Act of 1978 requires auto companies to pay a "gas guzzler" tax on the sale of cars with exceptionally low fuel economy. Such vehicles are identified in the Guide by the word "Tax" in the "Notes" column. In the dealer showroom, the words "Gas Guzzler" and the tax amount are listed on the vehicle's fuel economy label. The tax does not apply to light trucks.

WHY CONSIDER FUEL ECONOMY?

Save Money

You could save as much as \$1,700 in fuel costs each year by choosing the most fuel-efficient vehicle in a particular class. This can add up to thousands of dollars over a vehicle's lifetime. Fuel-efficient models come in all shapes and sizes, so you need not sacrifice utility or size.

Each vehicle listing in the *Fuel Economy Guide* provides an estimated annual fuel cost (see page i). The online guide at www.fueleconomy.gov features an annual fuel cost calculator that allows you to insert your local gasoline prices and typical driving conditions (percentage of city and highway driving) to obtain the most

accurate fuel cost information for your vehicle.

Reduce Oil Dependence Costs

Buying a more fuel-efficient vehicle can help reduce our dependence on petroleum. About half of the oil used to produce the gasoline you put in your tank is imported. The United States uses about 19 million barrels of oil per day, two-thirds of which is used for transportation. Petroleum imports cost us about \$269 billion a year—that's money that could be used to fuel our own economy.

Reduce Climate Change

Climate change is widely viewed as the most significant long-term threat to the global environment, and human-made emissions of greenhouse gases are very likely the cause of most of the observed global warming over the last 50 years.

Burning fossil fuels such as gasoline and diesel releases carbon dioxide (CO₂) and other greenhouse gases (GHGs) into the atmosphere, contributing to global climate change. CO₂ is the most important human-made GHG, and highway vehicles account for 28% (1.5 billion tons) of U.S. CO₂ emissions each year.

Every gallon of gasoline your vehicle burns puts about 20 pounds of CO₂ into the atmosphere; the average vehicle emits around 6 to 9 tons of CO₂ each year. Unlike other forms of vehicle pollution, CO₂ emissions cannot be reduced by pollution control technologies. They can only be reduced by burning less fuel or by burning fuel that contains less carbon.

One of the most important things you can do to reduce your contribution to climate change is to buy a vehicle with better fuel

economy. The difference between 25 miles per gallon and 20 miles per gallon can prevent the emission of 10 tons of CO₂ over a vehicle's lifetime, more than a year's worth of use.

You can also reduce your contribution to climate change by

- Getting the best fuel economy out of your car
- Using a low-carbon fuel, such as compressed natural gas (CNG) or electricity from a renewable resource such as wind or hydropower
- Walking, biking, or taking public transit more often

New fuel economy and CO₂ tailpipe emissions standards go into effect starting with model year 2012 vehicles.

FUELING OPTIONS

Ethanol Blends – E85 & E10

Ethanol is an alcohol fuel made by fermenting and distilling starch crops, such as corn. It may also be made from "cellulosic biomass" such as trees and grasses in the near future. The use of ethanol can reduce U.S. dependence on petroleum and reduce greenhouse gases.

E10 or "gasohol" is a blend of 10% ethanol and 90% gasoline sold in many parts of the country. All auto manufacturers approve the use of blends of 10% ethanol or less in their gasoline vehicles.

E85, a blend of 85% ethanol and 15% gasoline, can be used in flexible fuel vehicles (FFVs), which are specially designed to run on gasoline, E85, or any mixture of the two. FFVs are offered by several vehicle manufacturers. To determine if your vehicle is an FFV, check the inside of your car's fuel filler door for an identification sticker or consult your owner's manual. More than 2,400 filling stations in the United States currently sell E85. Visit <http://www.afdc.energy.gov/afdc/locator/stations/> for locations near you.

There is no noticeable difference in vehicle performance when low-level ethanol blends are used. However, FFVs operating on E85 usually experience a 25–30% drop in

MPG due to ethanol's lower energy content.

Biodiesel

Biodiesel is a commercially available diesel-replacement fuel manufactured from vegetable oils or animal fats. It produces fewer greenhouse gases than petroleum diesel and, since it is made domestically from renewable resources, increases national energy security.

Biodiesel can be blended at any ratio with petroleum diesel, but it is most commonly sold at ratios of 2%, 5%, or 20%, denoted as B2, B5, and B20. The vehicle manufacturers that produce the diesels listed in the *Fuel Economy Guide* currently approve the use of biodiesel blends of up to 5% (B5) in their vehicles and state that vehicle damage caused by using higher blends will not be covered under the manufacturer's warranty. Check your owner's manual or with your vehicle manufacturer to determine the right blend for your vehicle.

Use of biodiesel blends may reduce fuel economy slightly, with a drop of less than 1% for B5.

Purchase commercial-grade biodiesel from a reputable dealer. Never refuel with recycled grease or vegetable oil that has not been converted to biodiesel. It will damage your engine.

More than 600 stations currently sell B20. Visit <http://www.afdc.energy.gov/afdc/locator/stations/> for locations of service stations selling biodiesel.

Premium- vs. Regular-Grade Gasoline

Regular unleaded is the recommended gasoline for most cars. Using a higher-octane gasoline than recommended by the owner's manual does not improve performance or fuel efficiency; it only costs more money. Check your owner's manual to determine the lowest grade of fuel you can use.

FUEL ECONOMY AND ANNUAL FUEL COST RANGES FOR VEHICLE CLASSES

The graph below provides the fuel economy and annual fuel cost ranges for the vehicles in each class so you can see where a given vehicle's fuel economy and cost fall within its class. Combined city and highway MPG estimates are used; these assume you will drive 55% in the city and 45% on the highway. Annual fuel costs assume you travel 15,000 miles each year and fuel costs \$3.75/gallon for regular unleaded gasoline, \$4.02/gallon for premium, \$4.00 for diesel, and \$.12/kWh for electricity. Visit www.fueleconomy.gov to calculate annual fuel cost for a specific vehicle based on your own driving conditions and per-gallon fuel costs.

Fuel economy estimates on this chart do not include vehicles operating on compressed natural gas (CNG), electricity, or E85.

* Represents electric vehicles and plug-in hybrids. Fuel economy values for these vehicles are in miles per gallon gasoline equivalent (MPGe).

MODEL YEAR 2012 FUEL ECONOMY LEADERS

Listed below are vehicles with the highest fuel economy in the most popular classes. In vehicle classes where the most fuel efficient vehicle is a plug-in hybrid (PHEV) or electric (EV), a conventional or regular hybrid vehicle is also listed. Rankings are based on combined city and highway fuel economy estimates which assume 55% city driving and 45% highway driving. Please note that many vehicle models come in a range of engine sizes and trim lines, resulting in different fuel economy values. If there is only one vehicle in the class, we do not list a fuel economy leader.

* This vehicle is a plug-in hybrid, which runs on both gasoline and electricity. Since electricity is not measured in gallons, a conversion factor is used to translate the fuel economy when running on electricity into miles per gallon of gasoline equivalent (MPGe). The combined MPGe estimate includes a mix of gasoline and electric energy use.

† This is an all-electric vehicle. Since electricity is not measured in gallons, a conversion factor is used to translate the fuel economy into miles per gallon of gasoline equivalent (MPGe).

‡ When operated on gasoline.

2012 MODEL YEAR VEHICLES

This section contains the fuel economy values for 2012 model year vehicles. Additional information for alternative fuel vehicles can be found on pages 26–36. Alternative fuel vehicles are highlighted with a medium blue background, and those that can use two kinds of fuel, such as flexible fuel vehicles, have an entry for each fuel type. The most fuel-efficient vehicles in each class are listed in blue boldface type and marked with a blue pointer (▶).

DIESEL VEHICLES

Diesel-powered vehicles typically get 30-35% more miles per gallon than comparable vehicles powered by gasoline. Diesel engines are inherently more energy efficient, and diesel fuel contains 10% more energy per gallon than gasoline. In addition, new advances in diesel engine technology have improved performance, reduced engine noise and fuel odor, and decreased emissions of harmful air pollutants. Ultra-low sulfur diesel fuels also help reduce emissions from these vehicles.

Annual fuel costs below are estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a diesel fuel cost of \$4.00 per gallon.

COMPRESSED NATURAL GAS VEHICLES

Compressed natural gas (CNG) vehicles produce fewer smog-forming and greenhouse gas pollutants and reduce our dependence on petroleum. CNG fuel is normally dispensed in "equivalent gallons," where one equivalent gallon is equal to 121.5 cu. ft. of CNG. Therefore, the fuel economy values are shown in miles per gasoline-equivalent gallon. Annual fuel cost estimates are based on an average fuel price of \$2.13 per gasoline-equivalent gallon of CNG. The driving range is shown in miles and represents the distance the vehicle can travel on a full tank (or tanks) of fuel during combined city and highway driving (55% city and 45% highway).

ELECTRIC VEHICLES

Electric vehicles (EVs), also called battery electric vehicles (BEVs), are propelled by one or more electric motors powered by rechargeable battery packs. EVs are energy-efficient and reduce our dependence on petroleum since electricity is produced from domestic resources. They emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Electric motors have several performance benefits. They are quiet; they have instant torque for quick acceleration; and they require less maintenance than internal combustion engines.

Current EVs have a shorter driving range than gasoline or hybrid vehicles, and that range is more sensitive to driving style, driving conditions, and accessory use. Fully recharging the battery pack

can take several hours—though a “quick charge” to 80% capacity may take as little as 30 minutes—and options for charging the vehicle away from home may be limited. EVs are also more expensive than conventional vehicles and hybrids due to the cost of the large battery packs. Still, manufacturers are working hard to improve the driving range and reduce the cost of these vehicles, and public charging stations may become more common in the future.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying EV. Visit www.fueleconomy.gov for additional information on EVs, including tax incentives.

‡ Direct current permanent magnet

§ The Nissan Leaf™ electric vehicle is now available for customer order in the following 23 states AL, AZ, CA, CO, CT, DC, FL, GA, HI, IL, MA, MD, MS, NC, NH, NJ, NY, OR, SC, TN, TX, VA, WA. Additional states to be added throughout 2011 and 2012. See www.nissanusa.com or your Nissan dealer for order information and availability in your area.

¶ Alternating current induction motor

HYBRID-ELECTRIC VEHICLES

It's no accident the most fuel-efficient vehicles in some classes for the 2012 model year are hybrid-electric vehicles (HEVs). Hybrids combine the best features of the internal combustion engine with an electric motor and can significantly improve fuel economy without sacrificing performance or driving range. HEVs may also be configured to provide increased performance.

HEVs are primarily propelled by an internal combustion engine, just like conventional vehicles. However, they also convert energy normally wasted during coasting and braking into electricity, which is stored in a battery until needed by the electric motor. The electric motor assists the engine when accelerating or hill climbing and at low speeds where internal combustion engines are least efficient. Unlike all-electric vehicles or plug-in hybrids, HEVs now being offered do not need to be plugged into an external source of electricity to be recharged; conventional gasoline and regenerative braking provide all the energy the vehicle needs.

Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a fuel cost of \$3.75 per gallon for regular unleaded gasoline or \$4.02 for premium gasoline.

PLUG-IN HYBRID ELECTRIC VEHICLES

Plug-in hybrid electric vehicles (PHEVs) are hybrids with high capacity batteries that can be charged by plugging them into an electrical outlet or charging station. PHEVs can store enough electricity from the power grid to significantly reduce their petroleum consumption under typical driving conditions.

There are two basic PHEV configurations:

- **Series PHEVs, also called Extended Range Electric Vehicles (EREVs).** The electric motor is the only power source that turns the wheels; the gasoline engine only generates electricity. Series PHEVs can run solely on electricity until the battery needs to be recharged. The gasoline engine will then generate the electricity needed to power the electric motor. For short trips, these vehicles might use no gasoline at all.
- **Parallel or Blended PHEVs.** Both the engine and electric motor are mechanically connected to the wheels, and both propel the vehicle under most driving conditions. Electric-only operation usually occurs only at low speeds.

PHEVs also have different battery capacities, allowing some to travel farther on electricity than others. PHEV fuel economy, like that of EVs and regular hybrids, can be sensitive to driving style, driving conditions, and accessory use. When operating in pure electric mode, PHEVs emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Charging a PHEV's battery typically takes several hours, but a "quick charge" to 80% capacity may take 30 minutes or less. However, PHEVs don't have to be plugged in to be driven. They can be fueled solely with gasoline, like a conventional hybrid, but will not achieve maximum range or fuel economy without charging.

PHEVs use less petroleum and cost less to fuel than conventional hybrids, but they are more expensive to purchase.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying PHEV. Visit www.fueleconomy.gov for additional information on PHEVs, including tax incentives.

ETHANOL FLEXIBLE-FUEL VEHICLES

Ethanol flexible fuel vehicles (FFVs) are designed by the original manufacturer to operate on gasoline, E85 (a mixture of 85% ethanol and 15% gasoline), or any mixture of the two fuels. Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and an average fuel cost of \$3.14 per gallon for E85, \$3.75 per gallon for regular unleaded gasoline, and \$4.02 per gallon for premium unleaded gasoline. The price of ethanol is highly variable from region to region; it is typically lower in the midwestern United States and higher in other areas. Therefore, actual consumer experience may differ significantly from the annual fuel cost estimate presented here.

Fuel economy and driving range values are shown for both gasoline and E85. When operating your FFV on mixtures of gasoline and E85, such as when alternating between using these fuels, your driving range and fuel economy values will be somewhere between those listed for the two fuels, depending on the actual percentage of gasoline and E85 in the tank.

FUEL CELL VEHICLES

Fuel cell vehicles (FCVs) may not reach the mass market for a decade or more, but a limited number will be available for sale or lease in 2011-12 to demonstration fleets in areas with a readily accessible hydrogen supply. FCVs are propelled by electric motors powered by fuel cells, which produce electricity from the chemical energy of hydrogen. Fuel cell technology is more efficient than internal combustion engines and environmentally cleaner—the only by-product of a hydrogen fuel cell is water. However, many challenges must be overcome before FCVs are mass-marketed and sold at local dealerships. For more information about FCVs, visit www.fueleconomy.gov and the Fuel Cell Technologies Program Web site at www.eere.energy.gov/hydrogenandfuelcells/.

Fuel Cell Type	Motor Type & Power	Energy Storage Device & Rating	Fuel Type	Miles Per Kilogram City/Hwy/Comb	Driving Range (miles)	
MIDSIZE CARS						
HONDA FCX Clarity*	PEM*	100 kW DC (Brushless)†	288V Li-Ion	Hydrogen	60/60/60	240
SMALL STATION WAGONS						
MERCEDES-BENZ F-Cell‡	PEM*	100kW DCPM (Brushless)†	216V Li-ion	Hydrogen	52/54/53	190

* PEM = Proton Exchange Membrane or Polymer Electrolyte Membrane.

† DC = Direct current; DCPM = Direct current, permanent magnet

‡ MY 2012 F-Cell vehicles will be available in California (for lease only).

NEW FUEL ECONOMY LABELS FOR 2013 MODEL YEAR

EPA recently redesigned the Fuel Economy and Environment Labels that must be affixed to new vehicles starting with the 2013 model year. Manufacturers are allowed to start using the new labels on 2012 model year vehicles. So, you may want to familiarize yourself with the new label format. The example below shows a sample label for a gasoline vehicle. Slightly different designs will be used for flexible-fuel vehicles, electric vehicles and plug-in hybrids.

The image shows a sample EPA Fuel Economy and Environment label for a Gasoline Vehicle. The label is divided into several sections with callout boxes explaining their content:

- Top Left:** Fuel economy for city, highway, and combined city/highway driving (55% city and 45% highway) in miles per gallon. The label shows 26 MPG combined, 22 MPG city, and 32 MPG highway.
- Top Center:** Combined city/highway fuel economy range for vehicles in same EPA vehicle class and fuel economy for most efficient vehicle overall for model year. The label shows 26 MPG.
- Top Right:** Technology and fuel type, such as gasoline, diesel, flexible fuel (gasoline-ethanol [E85]), plug-in hybrid (electricity-gasoline), and electric vehicle. The label shows "Gasoline Vehicle".
- Middle Left:** Fuel consumption in gallons per 100 miles in combined city/highway driving. The label shows 3.8 gallons per 100 miles.
- Middle Right:** Fuel cost savings or extra expenditure compared to an "average" new vehicle of the same model year. The label shows "You save \$1,850 in fuel costs over 5 years compared to the average new vehicle."
- Bottom Left:** Annual fuel cost based on 15,000 miles per year at \$3.70 per gallon for regular unleaded and \$3.95 for premium. The label shows "Annual fuel COST \$2,150".
- Bottom Center:** Annual mileage, fuel cost, and other assumptions used to calculate estimates on the sticker. The label shows "Annual fuel COST \$2,150".
- Bottom Right:** Compares tailpipe emissions of smog-producing pollutants to those of other vehicles of the same model year. The label shows "Fuel Economy & Greenhouse Gas Rating (tailpipe only) 7" and "Smog Rating (tailpipe only) 6".
- Bottom Center (Bottom):** Compares fuel economy and tailpipe greenhouse gas emissions to those of other vehicles of the same model year. The label shows "fueleconomy.gov Calculate personalized estimates and compare vehicles".
- Bottom Right (Bottom):** QR Code. Scan the code with your smart phone to link to official information on fueleconomy.gov. The label shows a "Smartphone QR Code" with a "SAMPLE" QR code.

Drive More Efficiently

- Aggressive driving (speeding and rapid acceleration and braking) can lower your gas mileage by as much as 33% at highway speeds and 5% around town.
- Observe the speed limit. Each 5 MPH you drive over 60 MPH can reduce your fuel economy by 7-8%.

- Avoid idling. Idling gets 0 miles per gallon and costs you as much as \$0.04 per minute.

- Using cruise control on the highway helps you maintain a constant speed and, in most cases, will save gas.

Keep Your Car in Shape

- Fixing a car that is noticeably out of tune can improve gas mileage by about 4%.
- Keeping tires inflated to the recommended pressure and using the recommended grade of motor oil can improve fuel economy by up to 5%.

The manufacturer's recommended tire pressure can be found on the tire information placard and/or vehicle certification label located on the vehicle door edge, doorpost, glove-box door, or inside the trunk lid.

- Keep your tires aligned and balanced.
- Replacing a clogged air filter can improve gas mileage on older cars with carbureted engines.

Plan and Combine Trips

- A warmed-up engine is more fuel-efficient

than a cold one. Many short trips taken from a cold start can use twice as much fuel as one multipurpose trip covering the same distance.

Note: Letting your car idle to warm up doesn't help your fuel economy; it actually uses more fuel and creates more pollution.

Other Solutions

- Avoid carrying unneeded items. An extra 100 lbs. can decrease fuel economy by 1-2%.
- A roof rack or carrier provides additional cargo space and may allow you to meet your needs with a smaller car. However, a loaded roof rack can decrease your fuel economy by 5%.

Reduce aerodynamic drag and improve your fuel economy by placing items inside the trunk whenever possible.

For more mileage tips and information about gasoline pricing, visit www.fueleconomy.gov.
